

Fuel management

Fuel accounts for the highest cumulative expense in the lifetime of any vehicle.

Improving company fuel policies, managing consumption and taking measures to prevent fuel theft can provide significant savings over time.

Designed to increase efficiency and cut cost, Ituran's platform for fuel management and monitoring collects fuel information from one of the following sources— CAN bus, embedded fuel tank sensors and company refuel cards— to provide fleet managers with a full picture of fuel consumption in the entire fleet.

The system provides detailed analysis of consumption per tank, driver, vehicle, trip and fleet, pointing out usage fluctuation and irregularities. With access to real-time and historical fuel data, fleet managers are able to closely supervise and monitor fuel usage trends to improve fuel management and reduce costs.

- 24/7 real-time tracking and monitoring of fuel events via web
- Reduces carbon emissions through fuel efficiency to help maintain environment-friendly policies
- Smart monitoring system for improved fuel policies and prevention of fuel theft

Highlights

1

Improves fuel management and increase fuel efficiency

2

Generates significant savings

3

Reduces carbon emissions

4

Helps prevent fuel theft

Fuel consumption of each vehicle in the fleet is displayed in easy-to-read reports, which allow quick identification of negative fuel events, analyze consumption over time, compare between vehicles and consumption periods and make sure company policies are followed

Additional Solutions

Reeper Monitoring
