

# Reffer monitoring

Protect your goods while minimizing cooling costs with Ituran's solution for temperature storage-room monitoring. Protect your company's reputation and prevent costs associated with over/under cooling and compensation for damaged goods.

The system externally measures and controls temperature levels in closed spaces, independent of the installed cooling system. Data collected via sensors is analyzed to optimize cooling levels during the day; if temperature deviation occurs, real-time alerts via text message or e-mail allow immediate response before goods are damaged.

The solution is ideal for the Pharma and Food & Beverage categories where goods are extremely sensitive to storage conditions, and is excellent for a variety of storage facilities including rooms, refrigerators, mobile refrigerating and computer rooms.

- Accuracy of up to a tenth of a Celsius degree
- User-friendly monitoring and management application via web/internal-organizational interface
- Smart alerting mechanism measures temperature deviation according to criteria set by the customer in the control and management application and sends alerts via text or e-mail
- Data collected in company account and available to customer via comprehensive reports

## Highlights

**1**

Protects goods from unexpected storage temperature deviation

**2**

Optimizes cooling levels based on aggregated data collected over time

**3**

Monitors temp in real time and provides information on storing conditions

**4**

Alerts in real time to avoid damage and extra costs

Monitoring storage temperature with external independent sensors, guarantees goods are always kept in prime conditions. View temperature deviation in real time and respond immediately before goods are damaged, or analyze historical data for performance evaluation

## Additional Solutions

Maintenance Management

Driver Performance Evaluation for UBI

Advanced Driver Assistance Systems ADAS Integration

Vehicle Health

Fleet Management Software

Stolen Vehicle Tracking & Recovery

Real-Time Driver Assistance

Fuel Management & Monitoring
