

Ituran's recovery team was able to locate a stolen electric scooter, valued at approx. 10,000 NIS, within 10 minutes

A new system, developed by Ituran, was recently installed in this scooter. The Ituran TICK TRACK system is designed to locate electric Micro Mobility vehicles such as electric bicycles / electric scooters etc.

January 5 2021

Ituran TICK TRACK is an advanced Israeli development that connects electric Micro Mobility vehicles via an app that allows viewing the vehicle's status in real time. The system sends alerts when the customer's vehicle enters or exits a pre-defined area, in the event of unauthorized travel and more. The system is connected to the electric vehicles 24/7 through an app that allows viewing their location in real time, and includes history.

With the app you can receive an alert for entry or exit from a pre-defined area, for travel during hours that have been defined as prohibited for travel, for the start of unapproved vehicle travel, for excessive speeding and more.

"Ituran TICK TRACK PLUS" is an exclusive and unique service of its kind in Israel for management of electric vehicles using Ituran's operational system. The system includes a 24/7 service center and a field enforcement team of about 100 enforcers deployed throughout the country that work with security forces to prevent vehicle theft, recover stolen vehicles and now also recover stolen electric bicycles / scooters / golf carts and more. Ituran's TICK TRACK system is also intended for companies with a fleet of electric vehicles, courier companies, etc.

The system enables these companies to control and monitor their electric fleet, maximize the use of vehicles in accordance with the company's tasks, prevent excessive use, restrict areas and more, all through a dedicated real-time management interface.
